Response requested

Calumet City/Cooden Oil ILDC91706410

On this date a closure inspection was done at this facility. Their closure plan was approved 3-1-84; closure was completed & certified 7-13-84. Cooden Oil was a storage facility of drums. It remains a generator. This inspection disclosed the following: No waste was observed on-site with an accumulation date prior to 90 days from this date. Observed were 12 55 gal drums ^{of styrene glycol/benzene} _{properly labeled} in the storage area - all closed/non-leaking / on wooden pallets. The dates of accum. are as follows: 7-25-84; 2 for 7-27-84; 7-30-84; 8-1-84; 8-6-84; 8-7-84; 2 for 8-14-84; 8-17-84; 8-23-84; 9-6-84. Also, the storage area was clean. Mr. Harold indicated that their hauler (CPI) picks up the waste ^{within} when they've accumulated ~20-25 drums or before the 90-day cut off for storage - whichever comes 1st. He said there was a pick-up scheduled on 8-20-84. He also said that he entered into an agreement with other local generators such that the one transporter picks up several loads in one day to make a full load to haul to the final destination site. Also a manifest review was done - waste is picked up within 90 days.
